Refurbishment and extension of a Grade II listed Victorian building

Haines Phillips Architects were appointed as Design Manager by the Principal Contractor Quinn London Limited to oversee the co-ordination of the different elements of the design.

The scheme is a refurbishment and extension of a grade II listed Victorian building in High Wycombe to create space for a mix of new commercial uses with a total area of 1,260m^2 arranged over ground and mezzanine levels.

The existing building has been largely retained and sensitively refurbished while the extension is builtwith a Glulam frame and CLT(cross-laminated timber) wall panels with zinc wall-and roof-cladding.Polyester powder-coated aluminium glazing and curtain-walling elements are used throughout as aunifying element for the two parts-old and new- that make up the extended building.
